QG series

Discontinued: QG65 analog H-series. Successor: QG65N2 High accuracy series

QG65-KD-030H-AV-CM

Inclination sensor

2 axis horizontal mounting

Factory programmable device Output: 0,5 - 4,5 V

Measuring range programmable between ±1° and ±30°

Measuring range Factory defaults: ± 30°

QG series

Uout = $2.5 + 2*(\alpha/30)$ [V]

clipping outside measuring range

QG65-KD-030H-AV-CM

Default 0°: horizontal (label upwards), no acceleration applied.

Cross tilt sensitivity error: < (0,12 * cross tilt angle)² % typ.

 \rightarrow one axis <10° tilt for max. accuracy

Connection

Wire / pin coding

Connectivity (cable length ±10%)

M12 male 8p A-coding connector (Brass Nickel coated, contacts copper alloy)

Pin 1:	Output Y
Pin 2:	Supply voltage
Pin 3:	for factory use only
Pin 4:	for factory use only
Pin 5:	Gnd
Pin 6:	Centering input
Pin 7:	Output X
Pin 8:	Not connected

Center function

Centering can be done to eliminate mechanical offsets. To execute centering connect center input to ground (>0,5sec) within 1 min. after power up. After centering you have 1 min. left for another centering. Normally the center input should be left unconnected.

Optional: for accurate mounting two factory mounted positioning pins can be mounted (\emptyset 4mm) replacing 2x M5x25 mm.

As this device is accelerometer-based the sensor is inherent sensitive for accelerations/vibrations. Application specific testing must be carried out to check whether this sensor will fulfil your requirements.
