QR series

QR40EMN-090HB-2V-CM-UL

Absolute rotary encoder (contactless) Full Redundant

Output 0 - 5 V / 5 - 0 V

Supply voltage 10 - 32 Vdc

Measuring range 90° (±45°)

Intended use & UL

Intended use:

QR series sensors are intended to measure rotation after installing in machines, equipment and systems. Flawless function in accordance with the specifications is ensured only when the device is used within its specifications. Modifications or non-approved use are not permitted and will result in loss of warranty and void any claims against the manufacturer.

This device can be used as safety component according to the EU Machine Directive (ISO13849), if the cross-check function between both outputs is performed by the application. An algorithm should be implemented in the application that compares the two outputs of this sensor, and brings the application into safe state if the difference between the two outputs exceeds the limits that fits the application involved.
