QG series

QG40N-KDXYh-080-ASP-CM-UL

2 independent PNP outputs:
 - Programmable switchpoints $\pm S$ (optional QG40N Configurator)
 - Operation zone: conducting
 - Critical zone: non-conducting
 - Unpowered sensor: non-conducting

Factory defaults:
 - Switchpoint $\pm S$ output X: $\pm 80^\circ$
 - Switchpoint $\pm S$ output Y: $\pm 80^\circ$
 - hysteresis: $0,5^\circ$
 - operation \blacktriangleright critical delay : 0,5 s
 - critical \blacktriangleright operation delay : 1 s

The default 0° position is when the sensor is mounted horizontally (round nose upwards) and no acceleration is applied.

Only one axis may exceed 45° tilt.

Zeroing: eliminate mech. offsets
 Connect zeroing input to ground ($>0,5\text{sec}$) within 1 min. after power up. Normally the zeroing input should be left unconnected.

Zeroing is possible within $\pm 5^\circ$ tilt.

Intended use, UL, Remarks

QG series sensors are intended to measure inclination, acceleration or tilt angle after installing in machines, equipment and systems. Flawless function in accordance with the specifications is ensured only when the device is used within its specifications.

This device is not a safety component according to the EU Machine Directive (ISO13849). For full redundancy two devices can be used in the application.

Modifications or non-approved use are not permitted and will result in loss of warranty and void any claims against the manufacturer.

UL & c-UL listed product (File number E312057, UL508 standards UL60947-5-2 & CSA-C22,2 No. 14)

Product Identity / Category Code Number (CCN): Industrial Control Equipment / NRKH & NRKH7

Enclosure rating: type 1, Ambient temperature: max 80 °C (see also datasheet, lowest value applies)

Electrical ratings: Intended to be used with a Class 2 power source in accordance with UL1310,

max. input Voltage 32V dc (see also datasheet, lowest value applies), max. current 200mA

Accessory Cable Assembly: Any UL-listed (CYJV/7) mating connector with mechanical locking, wire thickness of at least 30 AWG (0,05 mm²), recommended ≤23 AWG (≥0,25 mm²)

As this device is accelerometer-based the sensor is inherent sensitive for accelerations/vibrations.

Application specific testing must be carried out to check whether this sensor will fulfil your requirements.
