DIS Sensors Quality Policy Statement

DIS Sensors has been synonymous with high-quality sensor technology for more than thirty years. From our office in Soest in the Netherlands we develop, manufacture and sell sensors for various applications and sectors.

As a family business with a flat management structure, one of our key priorities is to retain good staff members of as long as possible and to be a reliable supplier of high quality sensors. Innovation is in our blood, and knowhow is in our genes. The result: DIS Sensors serves the market with superior-quality products and solutions.

DIS Sensors sells internationally, mainly through distributors. Distributors are trained (product training) and they get technical support where needed. This is how DIS covers the global market. Rapid shipment of standard products and short response times for custom products are core competencies at DIS.

As the directors of DIS Sensors, we see our role as supplying our products consistently and as agreed with our customers. To us, quality means meeting agreed specifications and prices, as well as delivering on time and providing innovative solutions and services that satisfy our customers.

We strive to continuously improve customer satisfaction, ensuring that our products meet the agreed specifications as well as the applicable standards and legislation. We do this by effectively implementing our quality system according to ISO 9001:2015 and continuously monitoring and improving it.

The Management Board is responsible for fostering the quality culture within DIS Sensors, setting an example and establishing the required methodologies, resources and roles to ensure consistently high quality. We do this because we know that controlling and improving the quality and logistics of our processes is the foundation of our customers' trust in us. We invite all customers, partners, suppliers and employees to provide feedback on the execution of work and to make suggestions for improvement.

The intrinsic motivation and willingness to maintain high quality standards make quality a living concept.

On behalf of the directors of DIS Sensors bv.

Mark Dorrestein
Managing Director
