

Firmware release notes for sensor family: QGxxD CANopen H-type

Known issue, scheduled for new releases	Temporary workaround
The 2 bytes in object 1003h (predefined error register) containing 'manufacturer error data' are currently swapped.	The emergency message itself is OK. Ignore 1003h or 'swap back' after reading
Store parameters object 1010h subindex 02h, 03h, 04h not implemented according CiA standard	Use object 1010h subindex 01h to store each parameter

Firmware version number	Changes with respect to previous version	Date of release
V0.3.12	Function modes 6+7 added (QGxxN2 only) Disable function modes 4+5 for QGxxN2 Improved dynamic algorithm in slow moving situations	May 25 th 2021
V0.3.4	Initial release	December 1 st 2020
